

BUSINESS & DELIVERY BLUEPRINT

XO Platform

A business and solution blueprint for the nursery operating platform: product vision, roles, permissions, feature catalogue, operating journeys, rollout timeline and acceptance deliverables.

15 business modules

6 base roles

25 feature grants

Arabic & English

Delivery-ready roadmap

Document

Business & Delivery Blueprint

Version

1.1

Date

October 2026

Audience

Owners, delivery teams & partners

Contents

Read it top to bottom for the full picture, or jump straight to the module you care about.

01 Executive summary

What XO is, the problem it solves and the platform in numbers.

02 Who XO is for

The value each stakeholder gets: owner, director, finance, HR, teacher and parent.

03 The platform at a glance

The four portals and how they connect.

04 Modules and features

All 15 modules: what each one does, its features, who uses it and why it matters.

05 Roles and responsibilities

The six roles in the system and what each one can see and do.

06 Permissions

How access is controlled feature by feature, including custom roles and positions.

07 Key journeys

From first inquiry to enrolled child, a day at the nursery, and the monthly billing cycle.

08 Security, privacy and trust

How children's and families' data is protected.

09 Integration status and roadmap

Implemented workflows, provider stubs, planned capabilities and validation priorities.

10 Why XO

The business case and suggested demonstration flow.

11 Business operating timeline

How a family moves through the nursery lifecycle, the school day and the monthly finance cycle.

12 Indicative delivery plan and deliverables

A phased rollout baseline, decision gates, acceptance evidence and handover outputs.

Executive summary

XO Platform is a cloud system that runs a nursery from end to end. It brings admissions, child records, attendance and safe pickup, daily reports, billing and payments, staff management, events and parent communication into one product, in Arabic and English, on any device.

Permission-controlled
features

THE PROBLEM

Nurseries run on scattered tools

- Attendance on paper, and no record of who picked a child up.
- Parent communication spread across personal WhatsApp groups.
- Fees tracked in spreadsheets and cash collected with no trail.
- Late pickups and extra hours that are never billed.
- Parents who see nothing of their child's day.

THE SOLUTION

One platform, one source of truth

- Every child, family, class, invoice and staff member in one place.
- QR check-in and check-out with a full audit trail.
- Automatic recurring billing and late-pickup charges.
- A parent app with daily reports, photos, invoices and chat.
- Each person sees only what their role allows.

Three promises

RUN THE NURSERY

Admissions, classes, attendance, daily care, staff and operations are handled in guided screens instead of paper and spreadsheets.

DELIGHT PARENTS

Families follow their child's day in real time, pay online, sign permission slips and talk to teachers in one app.

CONTROL THE BUSINESS

Owners see revenue, collection, attendance and staff at a glance, and decide who can do what.

Built for the region

Full Arabic right-to-left interface, Egyptian pounds (EGP), local payment methods (InstaPay, Vodafone Cash, bank transfer and cash), and national-ID-based pickup verification.

Who XO is for

Each person in the nursery opens XO and sees a workspace built around their job, nothing more and nothing less.

STAKEHOLDER	WHAT THEY GET	BUSINESS OUTCOME
Nursery owner / group	One view across branches: enrollment, revenue, collection and attendance. Control over roles, pricing and promotions.	Decisions based on live numbers instead of month-end spreadsheets.
Branch director	Day-to-day operations: admissions, classes, attendance, events, media approval, staff and settings.	A calmer, faster day with fewer manual tasks.
Finance manager	Invoices, payment confirmations, overdue tracking, financial dashboard and reports, payroll and loyalty.	Faster collection, fewer errors and a complete audit trail.
HR manager	Staff directory, guided onboarding, positions, schedules and staff records.	An organised team, onboarded in minutes.
Teacher	A mobile classroom toolkit: attendance, QR scanner, daily reports, milestones, photos, class announcements and chat.	More time with children and less paperwork.
Parent	Their child's day, photos, reports, invoices and payments, permission slips, pickup QR codes and chat with the nursery.	Trust, transparency and loyalty.

The value in practice

Revenue the nursery used to lose

Late pickups are detected from the check-out scan and billed automatically according to the nursery's own rules. Extra-hours packages are used up first, and admins can correct or waive a charge.

Cash flow that arrives sooner

Parents choose and pay for a package during the application, before a seat is confirmed. Recurring tuition invoices are then generated on schedule, and reminders go out automatically.

Child safety parents can see

Every check-in and check-out records who scanned, how, and when. One-time pickup QR codes carry the delegate's ID card images.

A professional image

A branded, bilingual parent app with daily reports, galleries and progress reports sets the nursery apart from competitors that run on WhatsApp.

The platform at a glance

XO is one product with four portals. Everyone signs in at the same address and lands in the portal that matches their role.

ADMIN PORTAL

For owners, directors and managers

The control centre of a nursery: dashboard, children, staff, classes, admissions, attendance, events, packages, deals, invoices, reports, media, settings and permissions. The sidebar adapts to each user's permissions.

Branch admin

Chain admin

Manager

TEACHER PORTAL

A mobile-first classroom toolkit

Attendance and a QR scanner, daily reports, milestones, photo and video upload, classes and announcements, events, courses, reminders and chat. Teachers can also see their own payslips.

Teacher

PARENT PORTAL

The family app

Home feed, daily and quarterly reports, events and permission slips, invoices and payments, pickup QR codes, attendance history, milestones, gallery, meals, courses, rewards, health records, applications and chat.

Parent

XO CONSOLE

For the platform operator

Creates and manages nurseries, assigns their admins and plans, watches platform-wide analytics and payments, and can step into any nursery to help it.

XO super admin

Public pages

Families who are not yet customers can reach the nursery through a **public inquiry form** (one link per nursery) and an **online parent sign-up** that leads straight into the application.

Works everywhere

Any device

Responsive on phone, tablet and desktop. It installs on the home screen like a native app (PWA).

Live updates

Changes appear instantly for everyone, such as a new invoice, a check-in or a message, without refreshing.

Bilingual

Arabic (right-to-left) and English throughout, with a per-nursery default language.

Modules and features

XO is organised into 15 business modules. Each module below lists its key features, the people who use it and the value it brings.

#	MODULE	IN ONE LINE
1	Admissions & enrollment	From first inquiry to an enrolled, paying child, fully online.
2	Child profiles & health	One complete record per child, including medical safety data.
3	Classes & courses	Classrooms, teacher assignment and paid extra activities.
4	Attendance & safe pickup	QR check-in/out, audit trail and automatic late-pickup billing.
5	Daily care & learning progress	Daily reports, milestones, quarterly reports and meals.
6	Packages, pricing & deals	Tuition and extra-hours packages, billing periods and promotions.
7	Billing, payments & finance	Invoices, recurring billing, payment confirmation and finance dashboards.
8	Staff & HR	Onboarding, directory, positions, schedules and payroll.
9	Communication & notifications	Chat, broadcasts, inbox, push notifications and reminders.
10	Events & parent permissions	Calendar, digital permission slips, paid events and QR event check-in.
11	Media, content & community	Photo approval, child galleries, content library, community and surveys.
12	Loyalty & rewards	Points for payments, tiers and rewards redeemable on invoices.
13	Nursery settings & operations	Guided setup, rules for every area, inventory and branding.
14	Multi-branch & platform admin	Chains, nursery creation, plans, analytics and data export.
15	AI help assistant	An in-app assistant that answers questions and drafts actions.

01

Admissions & enrollment

Turn inquiries into enrolled, paying children through a guided online journey.

Key features

- Public inquiry form for each nursery, with inquiry tracking and a waitlist.
- Online parent sign-up and a multi-step application form.
- **Customisable registration templates:** admins choose the steps, their names, icons and order, and add custom questions with answer types and validation.
- Document upload and review, with clear statuses: draft, submitted, under review, documents pending, approved or rejected.
- During the application, parents choose a tuition package and billing period (monthly, quarterly, semi-annual or annual), plus an optional extra-hours package, and pay all or part before approval.
- Approval enrolls the child and starts the recurring tuition subscription in one step.
- A staff-side enrollment wizard for walk-in families.
- Bulk import of existing children from CSV or Excel, with AI-assisted column matching, a review screen and progress tracking.

Who uses it

Branch admin

Manager

Parent

Business value

Faster intake with no paperwork.

Payment is collected before a seat is confirmed, and the nursery can migrate from spreadsheets in minutes.

02

Child profiles & health

One complete, always-current record for every child.

Key features

- A complete child record: family and guardians, class, documents, billing, packages and attendance history.
- Health profile: allergies, chronic conditions, medications, vaccinations and medical documents.
- A health alerts dashboard that highlights children who need attention, with dismissible alerts.
- Parents can view their child's health information and submit health update requests for the nursery to review.
- Per-child billing view and tuition subscription management for admins.

Who uses it

Admin

Teacher

Parent

Business value

Child safety and one source of truth.

No more searching paper files when a parent calls or a child has an allergy.

03

Classes & courses

Organise classrooms and earn extra revenue from activities.

Key features

- Create classes, assign children and assign lead and assistant teachers.
- Class announcements that reach the families of that class.
- Extra-curricular courses (language, sport, art, music, academic) with schedule, monthly price, capacity, status and teacher.
- Parents browse and follow their children's courses, and teachers see the courses they run.

Who uses it

Admin Teacher Parent

Business value

Clear responsibilities per class, plus a new revenue line from after-hours activities.

04

Attendance & safe pickup

Know exactly who is in the building, who collected each child, and bill the extra time.

Key features

- QR check-in and check-out: staff scan the parent's QR code with the scanner built into any phone.
- Every scan records who scanned, the method (parent QR, one-time pickup QR or manual) and the time, in a full audit log.
- Authorised pickups and **one-time delegate pickup QR codes** that carry the delegate's ID card (front and back). The code is used up when the pickup is confirmed.
- Live attendance dashboard, KPIs, scan logs and per-child attendance reports.
- Parent absence reports, automatic pickup reminders before closing time and a nightly "missing check-out" review.
- **Automatic late-pickup billing** by the nursery's rules: grace period, 60/30/15-minute rounding, daily cap, optional early-arrival billing, and daily or monthly invoicing. Extra-hours packages are used first, and admins can correct or waive charges.
- Staff attendance tracking.

Who uses it

Admin Teacher Parent

Business value

Peace of mind for parents and a defensible record for the nursery. Extra hours that used to be forgotten are now billed automatically.

05

Daily care & learning progress

Show parents every day, and measure progress every term.

Key features

- Teachers write a daily report for each child (meals, nap, mood and activities). Reports can require management approval.
- Parents read daily reports with visual summaries and charts.
- Milestone recording by teachers, and a milestones timeline for parents.
- Quarterly (term) reports built from configurable templates, sections and grade levels.
- Weekly meal plans that parents can see.

Who uses it

Teacher

Admin

Parent

Business value

The strongest driver of parent trust and retention, with structured evidence of each child's development.

06

Packages, pricing & deals

Flexible pricing and promotions that turn interest into enrollment.

Key features

- **Fixed tuition packages** with price, included features and daily hours taken automatically from the nursery's opening and closing times.
- Billing periods per package (monthly, quarterly, semi-annual, annual), priced automatically from the monthly price and adjustable by hand.
- **Extra-hours packages:** unlimited or an hours quota, with a validity period, assigned to children.
- Packages are activated or deactivated, never deleted, to protect billing history. Each package shows how many children are on it.
- **Deals & discounts:** percentage or fixed-amount offers with an optional start and end date. Assign an existing deal to a package, or create a one-off custom discount from the package editor.
- Parents see the discount, the original and new price, and a **live countdown** while applying. The discount applies to the first (admission) invoice.
- Searchable, filterable tables of packages and deals, showing which packages and children each deal reaches.

Who uses it

Branch admin

Finance

Parent

Business value

Pricing that matches how the nursery actually sells, and time-limited offers that create urgency and lift sign-ups.

07

Billing, payments & finance

Bill on time, collect faster and always know where the money is.

Key features

- Invoices created automatically or by hand: admission invoices, **recurring tuition invoices generated daily on schedule**, late-pickup charges and event invoices.
- Parent invoice centre: view, download a PDF invoice or receipt, and pay all or part.
- Local payment methods: InstaPay, Vodafone Cash, bank transfer (with a reference number) and cash. The finance team confirms or rejects each payment.
- Safe money handling: every payment is locked, balance-checked and protected against double submission.
- Overdue tracking, late-payment fees and automatic payment reminders.
- Financial dashboard (revenue, collection, outstanding balances, top families, recent transactions) and financial reports with export.
- Summer pause with a configurable charge percentage.

Who uses it

Finance

Branch admin

Parent

Business value

Predictable cash flow, fewer disputes and a complete, auditable payment history.

08

Staff & HR

Hire, organise and pay the team from one place.

Key features

- A guided staff onboarding wizard: personal data, position, department, documents, national ID and the login account.
- Staff directory and profiles.
- Positions (teacher, assistant, nanny, driver, kitchen, cleaner, security, admin) plus custom positions. Each position is linked to a role so access is set automatically.
- Staff schedules and monthly staff attendance.
- Payroll: create payslips and keep payroll history. Staff see their own payslips.
- Monthly teacher reminder templates and personal reminders.

Who uses it

HR manager

Branch admin

Staff

Business value

A new hire is productive on day one with the right access, and payroll is no longer a spreadsheet exercise.

09

Communication & notifications

Replace personal WhatsApp groups with a professional, accountable channel.

Key features

- Real-time chat between parents, teachers and admins, including group conversations.
- Broadcast messages to all parents, a class or selected families, with broadcast history.
- Emergency broadcast for urgent situations.
- Unified inbox and notification centre, with in-app and push notifications on mobile.
- Quiet hours, daily message limits per parent, and automatic reminders for payments, permission deadlines and monthly teacher tasks.
- Email, SMS and WhatsApp channels built in and ready to connect (see chapter 9).

Who uses it

Everyone

Business value

Every conversation is kept, searchable and tied to the nursery rather than to a staff member's personal phone.

10

Events & parent permissions

Trips, celebrations and activities, with digital consent.

Key features

- An event calendar for trips, celebrations and activities, targeted to classes or children.
- **Digital permission slips:** parents approve or decline before a deadline, reminders go out automatically, and admins track the responses.
- Paid events generate invoices, under a configurable refund policy.
- QR check-in at events, with attendee lists.
- Parents can raise urgent requests that appear on the nursery's calendar.

Who uses it

Admin

Teacher

Parent

Business value

No more paper slips to chase, and an extra revenue stream from paid activities.

11

Media, content & community

Share the magic of the day safely.

Key features

- Teachers and admins upload photos and videos tagged to children. Images are compressed automatically.
- An approval workflow before parents see media, with optional auto-approval and a daily limit per child.
- A private gallery per child in the parent app.
- Content library of articles, tips and activities for parents.
- Community feed with posts and comments.
- Surveys and satisfaction (NPS) ratings.

Who uses it

Teacher

Admin

Parent

Business value

Engaged parents who share the nursery's work, with privacy protected by review before anything is published.

12

Loyalty & rewards

Reward families for staying and paying on time.

Key features

- Points earned for each EGP paid, at a rate the nursery sets.
- Loyalty tiers with configurable thresholds and a rewards catalogue.
- Parents see their balance and rewards and redeem points against invoices.

Who uses it

Finance Parent

Business value

Higher retention and a reason to pay on time.

13

Nursery settings & operations

Configure the nursery once; the platform follows its rules.

Key features

- Guided onboarding for a new nursery: details, opening hours, first class and the first teacher invitation.
- Settings grouped by area: profile, operations (hours, pickup and billing rules), admissions, events & permissions, communication, financial (pricing model, due days, payment methods), summer pause, media privacy, CCTV, loyalty, localisation and branding colours.
- Settings fields appear only when they apply. For example, the hourly rate shows only for the hourly pricing model.
- Inventory management and a nursery-wide calendar.

Who uses it

Branch admin XO team

Business value

The same product fits very different nurseries without custom development.

14

Multi-branch & platform administration

Run one nursery, a chain, or the whole platform.

Key features

- Chains: group branches under a chain administrator who oversees all of them.
- The XO console creates nurseries, assigns nursery admins and sets subscription plans (Starter, Professional, Enterprise).
- Platform-wide analytics and payments overview.
- The XO team can open any nursery's workspace to support it.
- Per-nursery data export for backup and portability.

Who uses it

XO super admin Chain admin

Business value

Scales from a single branch to a group without changing systems.

15

AI help assistant

A helper inside the app that understands the nursery.

Key features

- Answers "how do I..." questions in context, powered by Claude (Anthropic).
- Guided actions: open a page, draft a child record, event or broadcast, approve media, mark attendance, open a daily report, and show QR codes, events or reports.
- Users confirm every action, and safety rules and rate limits apply. Each user can switch the assistant on or off.

Who uses it

Admin

Teacher

Parent

Business value

Shorter training, faster adoption and fewer support calls.

Roles and responsibilities

Every user has exactly one role. The role decides which portal they open, which nursery data they can reach, and, together with permissions, which features they see.

ROLE	DATA SCOPE	TYPICAL PERSON	RESPONSIBILITIES
XO super admin	Every nursery on the platform	XO operations team	Creates nurseries and their admins, manages plans, platform analytics, roles and the feature catalogue. Has full access everywhere.
Chain super admin	All branches in their chain	Group owner	Oversees several branches with the same powers a branch admin has in one.
Branch admin	Their own nursery	Owner or director	Runs the nursery: admissions, children, staff, finance, settings, and the nursery's own custom roles and positions.
Manager	Their own nursery	Finance, HR or operations manager	Runs daily operations. Finance managers also handle money; HR managers also handle staff.
Teacher	Their classes and children	Lead or assistant teacher	Attendance, daily reports, milestones, media, class announcements and chat with families.
Parent	Their own children only	Mother, father or guardian	Follows their child, pays invoices, signs permission slips, manages pickups and talks to the nursery.

Manager departments

FINANCE

Also unlocks the finance dashboard, financial reports, invoices, payroll and loyalty.

HR

Also unlocks the staff directory and staff records.

OPERATIONS

Day-to-day operations without the finance or staff areas.

Teachers inside a class

Within a class, a teacher is assigned as **lead** or **assistant**, so responsibilities are clear even when several teachers share a room.

Least privilege by design

A user only ever sees their own nursery (or chain), and within it only the features their role allows. Parents only ever see their own children.

Permissions

Access is controlled in three layers. The role sets the data scope, the permission matrix sets which features appear, and each feature grants specific actions: view, create, update and delete.

Default permission matrix

"Top management" means chain and branch admins. XO super admins always have full access. Parents use their own portal and are not part of this matrix.

FEATURE	TOP MANAGEMENT	MANAGER	TEACHER
Attendance dashboard	Full	Full	Full
Finance dashboard	Full	Finance only	No access
News feed	Full	Full	Full
Children / applications	Full	Full	No access
Staff	Full	HR only	No access

Meals	Full	Full	No access
QR codes	Full	Full	No access
Health alerts	Full	Full	Full
Loyalty	Full	Finance only	No access
Broadcast messages	Full	Full	No access

Customising access

CUSTOM ROLES

Shape access to your organisation

Create roles such as "Floor Supervisor" or "Office Receptionist", choose their features, and grant view, create, update or delete per feature, with optional approval.

Each custom role is built on one of the base roles. It can hide features, but it can never reach more data than its base role allows.

POSITIONS

Access that follows the job title

Each position, such as Lead Teacher or Head Cook, is linked to a role. When HR onboards a staff member into a position, the right access is applied automatically.

Built-in positions and roles are protected. Nurseries add their own on top.

Who can change permissions

ROLE	AUTHORITY
XO super admin	Manages the platform-wide feature catalogue and any role or position, and can assign any role. Changes are logged.
Branch / chain admin	Creates and edits custom roles, positions and feature grants inside their own nursery or chain.
Manager, teacher, parent	Read-only. They cannot change roles or permissions.

What parents can do

Parents have their own portal and only ever see data about their own children. They can view reports, galleries, attendance, milestones and health information; pay invoices; approve or decline permission slips; issue pickup QR codes; submit applications and health updates; report absences; and chat with the nursery.

Key journeys

JOURNEY A

From inquiry to enrolled child

- 1 **Inquiry.** A family fills in the nursery's public inquiry form. If no seat is free, the family joins the waitlist.
- 2 **Sign up and apply.** The parent creates an account and completes the nursery's own registration steps and documents.
- 3 **Choose a package.** The parent picks a tuition package and billing period and sees any live deal with its countdown.
- 4 **Pay.** The admission invoice is created. The parent pays all or part, and finance confirms the payment.
- 5 **Review.** The nursery reviews the application and documents.
- 6 **Approve.** One click enrolls the child and starts the recurring tuition subscription.

JOURNEY B

A day at the nursery

- 1 **Arrival.** The teacher scans the parent's QR code and the parent is notified of check-in.
- 2 **The day.** The teacher posts photos for approval and writes the daily report.
- 3 **Live view.** The director watches attendance and health alerts on the dashboard.
- 4 **Pickup reminder.** Parents of children still in the building are reminded before closing.
- 5 **Pickup.** The parent's or a delegate's QR code is scanned, and the system logs who collected the child.
- 6 **Late?** Extra time is billed automatically by the nursery's rules.

JOURNEY C

The monthly billing cycle

Security, privacy and trust

Nurseries hold some of the most sensitive data there is: information about young children. XO protects it at every layer.

Each nursery's data is sealed off

Isolation is enforced inside the database itself, not only in the app, so one nursery can never read another's records. Automated cross-tenant denial checks verify this.

Role-based access everywhere

The interface hides what a role cannot use, and the database refuses it anyway.

Audit trails

Every attendance scan records who, how and when. Role changes are logged, and payments keep a full history of attempts, confirmations and rejections.

Privacy controls for media

Photos can require approval before parents see them, are visible only to the families of the children in them, and are subject to per-day limits.

Safe money handling

Payments are locked and balance-checked, and protected against double clicks and retries. Parents cannot pay against someone else's invoice.

Backups and recovery

Per-nursery data exports, a documented backup and recovery process, and an incident runbook.

Hosting

XO runs on managed cloud infrastructure: Supabase (PostgreSQL, authentication, storage and realtime) and Vercel for the web application, served over HTTPS.

Integration status and roadmap

The feature catalogue describes product capabilities. A capability in the codebase does not necessarily mean its external provider is connected or that it is enabled in every deployment; the distinctions below are based on the repository documentation and implementation.

CAPABILITY	STATUS	DETAILS
Email notifications	Provider stub	The Edge Function builds and logs email payloads; its source labels the Resend delivery call as stubbed. Do not treat email delivery as active until provider integration and a delivery test are complete.
SMS notifications	Provider stub	The SMS Misr call is stubbed; OTP and fallback templates exist. Activate only after credentials, provider wiring and end-to-end testing.
WhatsApp notifications	Provider stub	The 360dialog call is stubbed. A daily limit is enforced in code but is documented as hard-coded; verify configured limits before launch.
Online card and wallet payments	Not integrated	The Paymob client currently returns an empty checkout URL. Parents can declare supported local/manual payment methods and finance confirms attempts; hosted checkout requires implementation, credentials and reconciliation tests.
CCTV live view for parents	Planned	Settings and data structures are documented, but the camera viewing experience is not built. Requires privacy, consent, retention and access-control design before release.
School bus and transport	Schema only	Route and bus-attendance data structures exist; operational screens and tracking workflows are not built.

Suggested next steps

OPERATIONAL READINESS

Connect and verify messaging providers, secrets, delivery callbacks, failure handling and opt-out rules.

REVENUE

Complete hosted checkout only after payment-provider callbacks, duplicate protection, refunds and reconciliation are tested.

FUTURE SCOPE

Define privacy, consent and operational requirements before estimating CCTV or transport user experiences.

Why XO

Less manual work

Admissions, attendance, billing and reminders run themselves, so staff spend their time with children.

More revenue, sooner

Payment before a seat is confirmed, recurring billing, automatic late-pickup charges, paid events, courses and promotions.

Parents who trust you

Daily reports, photos, live check-in and check-out, digital permission slips and direct chat in a bilingual app.

Control without chaos

Every role sees exactly what it should, every action is logged, and every number is live.

The XO promise

XO reduces manual work inside the nursery, improves communication with families, gives management a clear operational and financial view, and protects every child's data with precise, role-based access.

Suggested demo flow

- 1 **Admin dashboard.** Sign in as a branch admin and show live attendance, alerts and the finance summary.
- 2 **Admissions.** Open an application with a chosen package, a live deal and payment status, then approve it.
- 3 **Attendance.** Scan a QR code, show the audit log and a late-pickup charge.
- 4 **Teacher experience.** Write a daily report and upload an activity photo.
- 5 **Parent experience.** Show the home feed, daily report, gallery, invoice payment and permission slip.
- 6 **Control.** Finish with roles and permissions: a teacher cannot see finance, and a finance manager can.

Business operating timeline

XO connects the family lifecycle to the nursery's recurring operating rhythm. The timeline below is a business-process view, not a claim that every step is automatically enabled for every nursery.

Family lifecycle

Business outcome

A single record follows the family from first inquiry through enrollment and ongoing care, reducing repeated data entry while preserving approvals and payment history.

Nursery operating rhythm

CADENCE	TEAM ACTIVITY	XO WORKFLOW	BUSINESS EVIDENCE
Opening / arrival	Confirm children arriving and safely identify the collecting adult.	QR/manual attendance, authorised pickup validation, attendance dashboard and parent notification.	Timestamped attendance and pickup audit trail.
During the day	Care for children, record meals and rest, share learning moments and raise health concerns.	Daily reports, health alerts, milestones, approved media and class communication.	Child-level care record visible to authorised families.
Closing / pickup	Check children out and follow up on late or missing check-outs.	Pickup QR, closing reminders, exception review and late-charge calculation where configured.	Reconciled attendance and explainable exceptions.
Weekly	Plan meals, activities and upcoming events; monitor inquiries and staffing.	Meal plans, calendar, event permissions, waitlist and staff schedules.	Published plans, event responses and operational coverage.
Monthly	Review tuition, payment collection, overdue balances, payroll and occupancy.	Recurring invoice cycle, payment review, reminders, financial dashboard and payroll records.	Invoice, payment, payroll and collection reports.

CADENCE	TEAM ACTIVITY	XO WORKFLOW	BUSINESS EVIDENCE
Term / annual	Review progress and family feedback; renew packages and plan capacity.	Quarterly reports, milestones, surveys, loyalty, packages and analytics.	Progress evidence, feedback trends and renewal pipeline.

Monthly finance timeline

Online checkout depends on provider integration. Manual payment submission and finance review are the documented current workflow; verify the deployed configuration before promising automated payment capture.

Indicative timeline and deliverables

This is an indicative, module-led rollout plan based on the 15 business modules already represented in the XO repository. It plans configuration, integration completion, data preparation, validation, pilot and handover—not a ground-up rebuild of all 15 modules. A module appearing in the codebase is not, by itself, proof that it is production-ready or enabled for a tenant; each wave has an explicit acceptance gate.

12 weeks

 Acceptance before each
wave

Module rollout timeline

WHEN	WAVE	EXISTING XO MODULES IN SCOPE	WAVE DELIVERABLES	EXIT GATE
Weeks 1–2	0 · Foundation & readiness	Platform and tenant setup; role-based access; nursery settings and onboarding (Modules 13–14 foundation).	Tenant/configuration register; role and permission review; environment and migration inventory; data-import plan; baseline defects and integration register.	Named pilot nursery and owners; role/data boundaries approved; migration and backup state checked; launch scope and exclusions signed off.
Weeks 3–4	1 · Enrolment & child record	Admissions and enrolment (1); child profiles and health (2); packages, pricing and deals (6).	Registration templates and statuses configured; sample inquiry-to-application journey; package/deal catalogue; child/guardian/health data mapping; reconciled trial import.	Representative parent application can be reviewed and approved; resulting child and package links reconcile; sensitive health and document access is checked.
Weeks 5–6	2 · Classroom & daily operations	Classes and courses (3); attendance and safe pickup (4); daily care and learning progress (5).	Class/teacher assignments; QR and authorised-pickup setup; attendance exception procedures; daily-report, milestone, meal and parent-view scenarios; staff training pack.	Admin/teacher/parent scenarios pass for arrival, care and pickup; attendance audit events and permission boundaries are verified.

WHEN	WAVE	EXISTING XO MODULES IN SCOPE	WAVE DELIVERABLES	EXIT GATE
Weeks 7–8	3 · People & finance	Staff and HR (8); billing, payments and finance (7); pricing/deals hand-off from Module 6.	Staff positions, schedules and payroll setup; invoice and subscription rules; payment-method configuration; finance review/reconciliation procedure; opening-balance and sample-invoice checks.	Invoice totals and balances reconcile; payment submission and finance confirmation/rejection are tested; staff see only their permitted HR/payroll records. Hosted Paymob checkout is excluded unless separately integrated and accepted.
Weeks 9–10	4 · Family engagement & retention	Communication and notifications (9); events and permissions (10); media/content/community (11); loyalty and rewards (12).	Chat/inbox and broadcast rules; event and consent calendar; media privacy and approval settings; survey/community settings; loyalty earning/redemption checks; provider readiness decision.	Parent-facing communication, consent and media visibility pass with test accounts. Email, SMS and WhatsApp remain marked stubbed until actual provider delivery is proven.
Weeks 11–12	5 · Platform, UAT & launch	AI help assistant (15); chain/platform administration, analytics and tenant export (14); end-to-end regression across Modules 1–13.	AI scope/safety check; tenant/chain access and export rehearsal; UAT evidence; defect closure; go/no-go pack; production runbook, training and hypercare ownership.	Critical journeys pass in the production-like environment; tenant-isolation and restore/export checks pass; business owner signs go/no-go and support accepts handover.

Cross-wave delivery deliverables

WORKSTREAM	DELIVERABLE	ACCEPTANCE EVIDENCE	OWNER
Product & business	Approved module scope, workflow owners, configuration decisions, role/feature/action matrix and release exclusions.	Named business owner signs off every in-scope workflow and its accountable approver.	Product owner + nursery lead
Data & operations	Source-to-target mapping; trial and final import/reconciliation; operating procedures for attendance, health alerts, payment exceptions, and media approvals.	Import counts and financial totals reconcile; exception handling is demonstrated by trained users.	Data lead + operations

WORKSTREAM	DELIVERABLE	ACCEPTANCE EVIDENCE	OWNER
Engineering & quality	Migration/deployment record; role and tenant-isolation checks; end-to-end UAT evidence; regression report; defects with severity and owner.	Release-blocking defects are closed or explicitly accepted; database migration state matches the release.	Engineering lead + QA
Integrations	Provider-by-provider status register for payments, email, SMS, WhatsApp and push; secrets owner; callback/retry/failure and reconciliation evidence where enabled.	A provider is labelled live only after a real end-to-end delivery/payment and failure-path test; otherwise it remains stubbed or out of scope.	Integration owner + finance
Launch & handover	Go/no-go decision; admin/staff/parent guides; role and settings register; incident contacts; backup/export/restore evidence; hypercare log and next-wave backlog.	Production smoke test passes; operations owner accepts the runbook and support responsibility.	Business owner + support lead

Repository-specific readiness items to include in the plan

QUALITY BASELINE

The repository currently has no configured `test` script or matching unit-test files. An earlier `npm run typecheck` run on 8 October 2026 reported 115 TypeScript errors across 17 source files. Re-run the checks at project kickoff, record the new baseline, and agree remediation priorities before calling the application release-ready.

INTEGRATION SCOPE

The codebase contains email/SMS/WhatsApp provider stubs, a Paymob client that returns an empty checkout URL, and camera/transport schema without complete user-facing workflows. Treat these as explicit work packages or exclusions—not completed launch features.

Go-live exit checklist

BUSINESS READINESS

- Nursery owner, admin, finance and class leads are trained and know escalation contacts.
- Representative children, guardians, classes, authorized pickups, packages and balances are reconciled.
- Role tests confirm each user sees only permitted features and records.
- Families receive clear instructions for login, attendance, payments and consent.

TECHNICAL READINESS

- Production environment, secrets, backups, migration state and rollback plan are verified.
- Critical routes and workflows pass smoke tests; errors and monitoring owners are defined.
- External providers are explicitly marked connected, stubbed or out of launch scope.
- Support, incident response, data export and recovery procedures are available.

Planning assumptions

One pilot nursery, an available business decision-maker, timely data and user access, a named implementation owner, and no major net-new module build are assumed. The 12-week estimate covers configuration and rollout of capabilities already represented in the repository plus agreed validation and defect remediation. If production-readiness work reveals substantial missing implementation, unstable external providers, migration/data-quality issues, or unplanned scope (including Paymob, messaging, transport or CCTV), re-estimate the affected wave before committing dates.
